SALT WATER VEHICLE SERVICES

Don't let corrosion ruin your salt life; protect your beach vehicle with MILSPRAY Rustproofing!

Salt spray (chlorides) from the ocean are carried 35 miles inland. Chlorides are known to accelerate corrosion so we are dealing with chlorides during our seasonal beach lifestyle. These chlorides form an easy path for condensation to form. Since the corrosion cell works like a battery-operated device, which allows the free movement of electrons to pass over the surface of metal, the energy that was used to manufacture the metal in the form of heat, is slowly released back into the environment while consuming the metal in the form of rust and corrosion.

Those same chlorides also work to accelerate corrosion of metals. Various colored oxide deposits form on the solution of chlorides, moisture and oxygen at the active corrosion cell. Heavily scaled oxides on carbon-based steel characteristically look like oversize and thick potato chips that are formed on the good metal substrate.

Contact us to stop this cycle and keep you beach vehicle *CORROSION FREE!*

FEATURES

Our product is a trade secret. Our trained spray technicians do the job for you.

MILSPRAY® Rustproofing prevents corrosion of dissimilar metals (aluminum/steel).

MILSPRAY® Rustproofing can be applied on new, used or even rusty vehicles.

Our guarantee is the strongest in the industry.

BENEFITS

Our approach is unlike conventional tar, wax or sealant coatings. MILSPRAY® Rustproofing is the proven system that really works.

- No more black tar messes from re-application.
- Reduce corrosion problems and increase resale value.
- Reduce repaints.
- Reduction of replacement parts, brake cables, oil and transmission pans/bolts, and battery compartments.
- Reduce electrical wiring breakdowns caused by corrosion, or the greening of wires.
- Reduce wear on windows, lock assemblies, door pins, hood and trunk hinges.
- And much more!

MILSPRAY®

SALT WATER VEHICLE MAINTENANCE PROGRAM

PROTECT YOUR BEACH VEHICLE FROM RUST AND CORROSION

OUR RUSTPROOFING PROTECTION SYSTEM COVERS ALL THESE AREAS OF YOUR VEHICLES

MILSPRAY Rustproofing is not an undercoating, it is a body maintenance program. Unlike an undercoating, MILSPRAY Rustproofing provides protection to your whole vehicle and it cannot be chipped or cracked. The ultra thin film creeps and crawls into seams, cracks and crevices where corrosion begins and provides an active barrier between the metal and the causes of corrosion. MILSPRAY Rustproofing is an active product that is used before the metal is corroded. Reapplication every 6-12 months depending on your location, guarantees protection to your vehicle.

Untreated

Treated

WHY MILSPRAY®

Reduce Maintenance Costs

Whether your vehicles are brand new or has 300,000 miles driven, we are confident that the use of MILSPRAY Rustproofing annually, will achieve cost savings through decreased corrosion related maintenance and repairs, thereby enabling you to keep your vehicles in peak working condition longer.

Increase Vehicle Longevity

Plan on keeping your fleet of vehicles for 10 years or more? With MILSPRAY Rustproofing, you will be able to achieve that and more. Even one extra year can pay for 10 years of applications!

A More Professional Look

Rust will push its way under paint, destroying your vehicle's exterior and ruining your professional look. MILSPRAY Rustproofing is a body maintenance application that keeps corrosion at bay - chips, nicks and scratches may have surface rust but with MILSPRAY Rustproofing, that is where it stops!
